

Daniel Gonzalez Morales

Engineering Manager | Technical Leader | Full-Stack Engineer
Columbia, MO | LinkedIn: daagonzalezgm

SUMMARY

Hands-on engineering leader with 8+ years of experience building and modernizing business applications, customer-facing workflows, APIs, distributed systems, and internal platforms. Currently lead 14 engineers while remaining deeply involved in technical direction, architecture, implementation, and troubleshooting. Experienced partnering with Product to shape technical roadmaps, leading platform modernization, and translating complex business needs into maintainable software. Strong background in C#, .NET, TypeScript, Angular, distributed systems, Kubernetes, and event-driven architecture.

TECHNICAL SKILLS

Languages: C#, .NET, TypeScript, JavaScript, Angular, Node.js, Express

Architecture: DDD, Clean Architecture, Event-Driven Architecture, Distributed Systems, REST APIs

Infrastructure: Kubernetes, Docker, AWS, Azure DevOps, GitHub, CI/CD, Octopus Deploy

Data & Messaging: SQL Server, MySQL, Redis, RabbitMQ, SignalR

Practices & Tooling: TDD, Automated Testing, AI-Assisted Development, Nx, NgRx, RxJS

PROFESSIONAL EXPERIENCE

Software Engineering Manager

October 2024 - Present

Veterans United Home Loans

Columbia, MO

- Lead a team of 14 engineers responsible for a UI platform used to build applications that loan teams rely on to manage loan data and workflows.
- Own and influence the team's technical roadmap in partnership with Product and engineering leadership, balancing product needs, platform modernization, operational reliability, and long-term technical investments.
- Set technical direction for an internal UI platform, guiding modernization of an Nx/Angular monorepo while navigating framework upgrades, developer experience, architectural improvements, and adoption of AI-assisted development.
- Partner directly with Product to translate business and user needs into technical direction, prioritize investments, and shape the team's roadmap.
- Conduct architecture and code reviews and work closely with the team's architect across the internal UI platform and Realty Domain.
- Build domain-specific Angular libraries, generators, and shared components that establish consistent patterns and reduce the effort required for engineering teams to build new UIs.

- Help define architecture for applications spanning multiple domain libraries, including approaches for synchronizing data and coordinating behavior across domain boundaries.
- Develop developer-experience improvements and AI agent skills to improve engineering workflows and accelerate delivery.
- Mentor 9 engineers across engineering and management roles and contribute to recruiting through technical interviews, candidate evaluation, and hiring decisions.

Software Engineer

April 2020 - October 2024

Veterans United Home Loans

Columbia, MO

- Collaborated with architects and senior engineers to design and implement a Realty Domain API using Domain-Driven Design, Clean Architecture, and event-driven architecture, establishing clear domain boundaries around a complex business process.
- Developed much of the detailed system design and served as an unofficial technical lead during implementation, including aggregate lifecycles, explicit state transitions, and domain events that allowed downstream systems to process side effects independently.
- Migrated 6 applications from .NET Framework to .NET Core and 3 applications from VM-hosted environments to Kubernetes, including APIs and RabbitMQ-based Windows services.
- Built and maintained distributed integrations using RabbitMQ and SignalR, including APIs, orchestration services, communication layers, and workflow processors.
- Investigated complex application and production issues by tracing workflows through unfamiliar codebases and distributed systems to identify root causes and implement targeted fixes.
- Developed Azure DevOps build and release pipelines and built internal automation for test-data generation, data evaluation, and AI-assisted refactoring.

DAC Solutions

Full-Stack Developer

January 2018 - April 2020

DAC Solutions

Costa Rica

- Worked directly with an initial end user to understand operational needs and help shape an application for truck drivers managing routes and inventory.
- Built full-stack functionality using Node.js, Express, AngularJS, and MySQL.
- Helped evolve the application from a solution for its original user into a product distributed to additional users.
- Deployed applications using AWS and packaged the web application as an Android application using Cordova/PhoneGap.

EDUCATION

Bachelor of Science in Computer Science

University of Costa Rica | 2018
